At minus 11 degrees and with a constant 10 mph NW wind, I watched with amazement a small herd of deer feeding on a variety of native grasses and wildflowers. The ground was covered with well over 12 inches of snow--and in some places the drifts were nearly double. As the sun began to shine through the clouds, the deer unanimously decided to lay down in the copper colored grasses under this single white oak tree.

Oberle Farm - Winter 2010
